Programming Using C#, Basic Course**

Multiplication Table

Exercise - Rectangular Array
Optional – not to be submitted

[Farid Naisan](#)

University Lecturer
Department of Computer Science

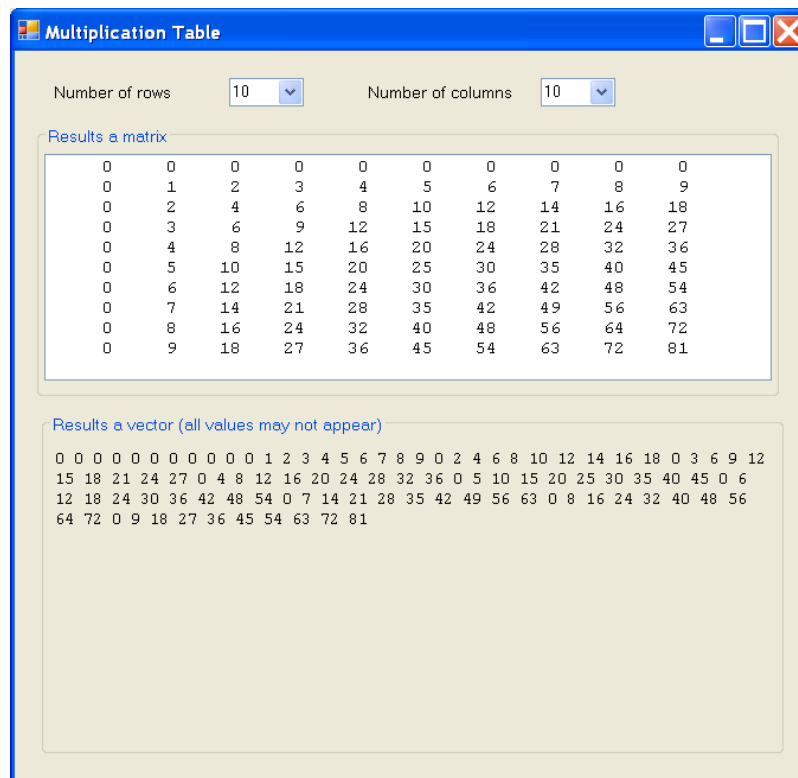

Exercise – Multiplication Table

1. Objectives

- 1.1. To work with a rectangular array.
- 1.2. To begin using the `get`- and `set` properties

2. Description

Write a Windows program that lets the user choose a number between 1 and 20. The program should then show a multiplication table for the chosen value.

3. Instructions

Write a class **MultiplicationTable.cs** with methods that carry out the above operations. All fields (attributes) should be declared as `private`. Access to data is to be done by `public get` and `set` properties.

4. Solution

The project as a whole is available for download from the module.

Good Luck! Programming is fun. Never give up. Ask for help!
 Farid Naisan, Course Coordinator and Instructor
